

BIO392

Bioinformatics of Genome Variations

Genomes: Core of "Personalized Health" & "Precision Medicine"

Michael Baudis **UZH SIB**
Computational Oncogenomics

University of
Zurich^{UZH}

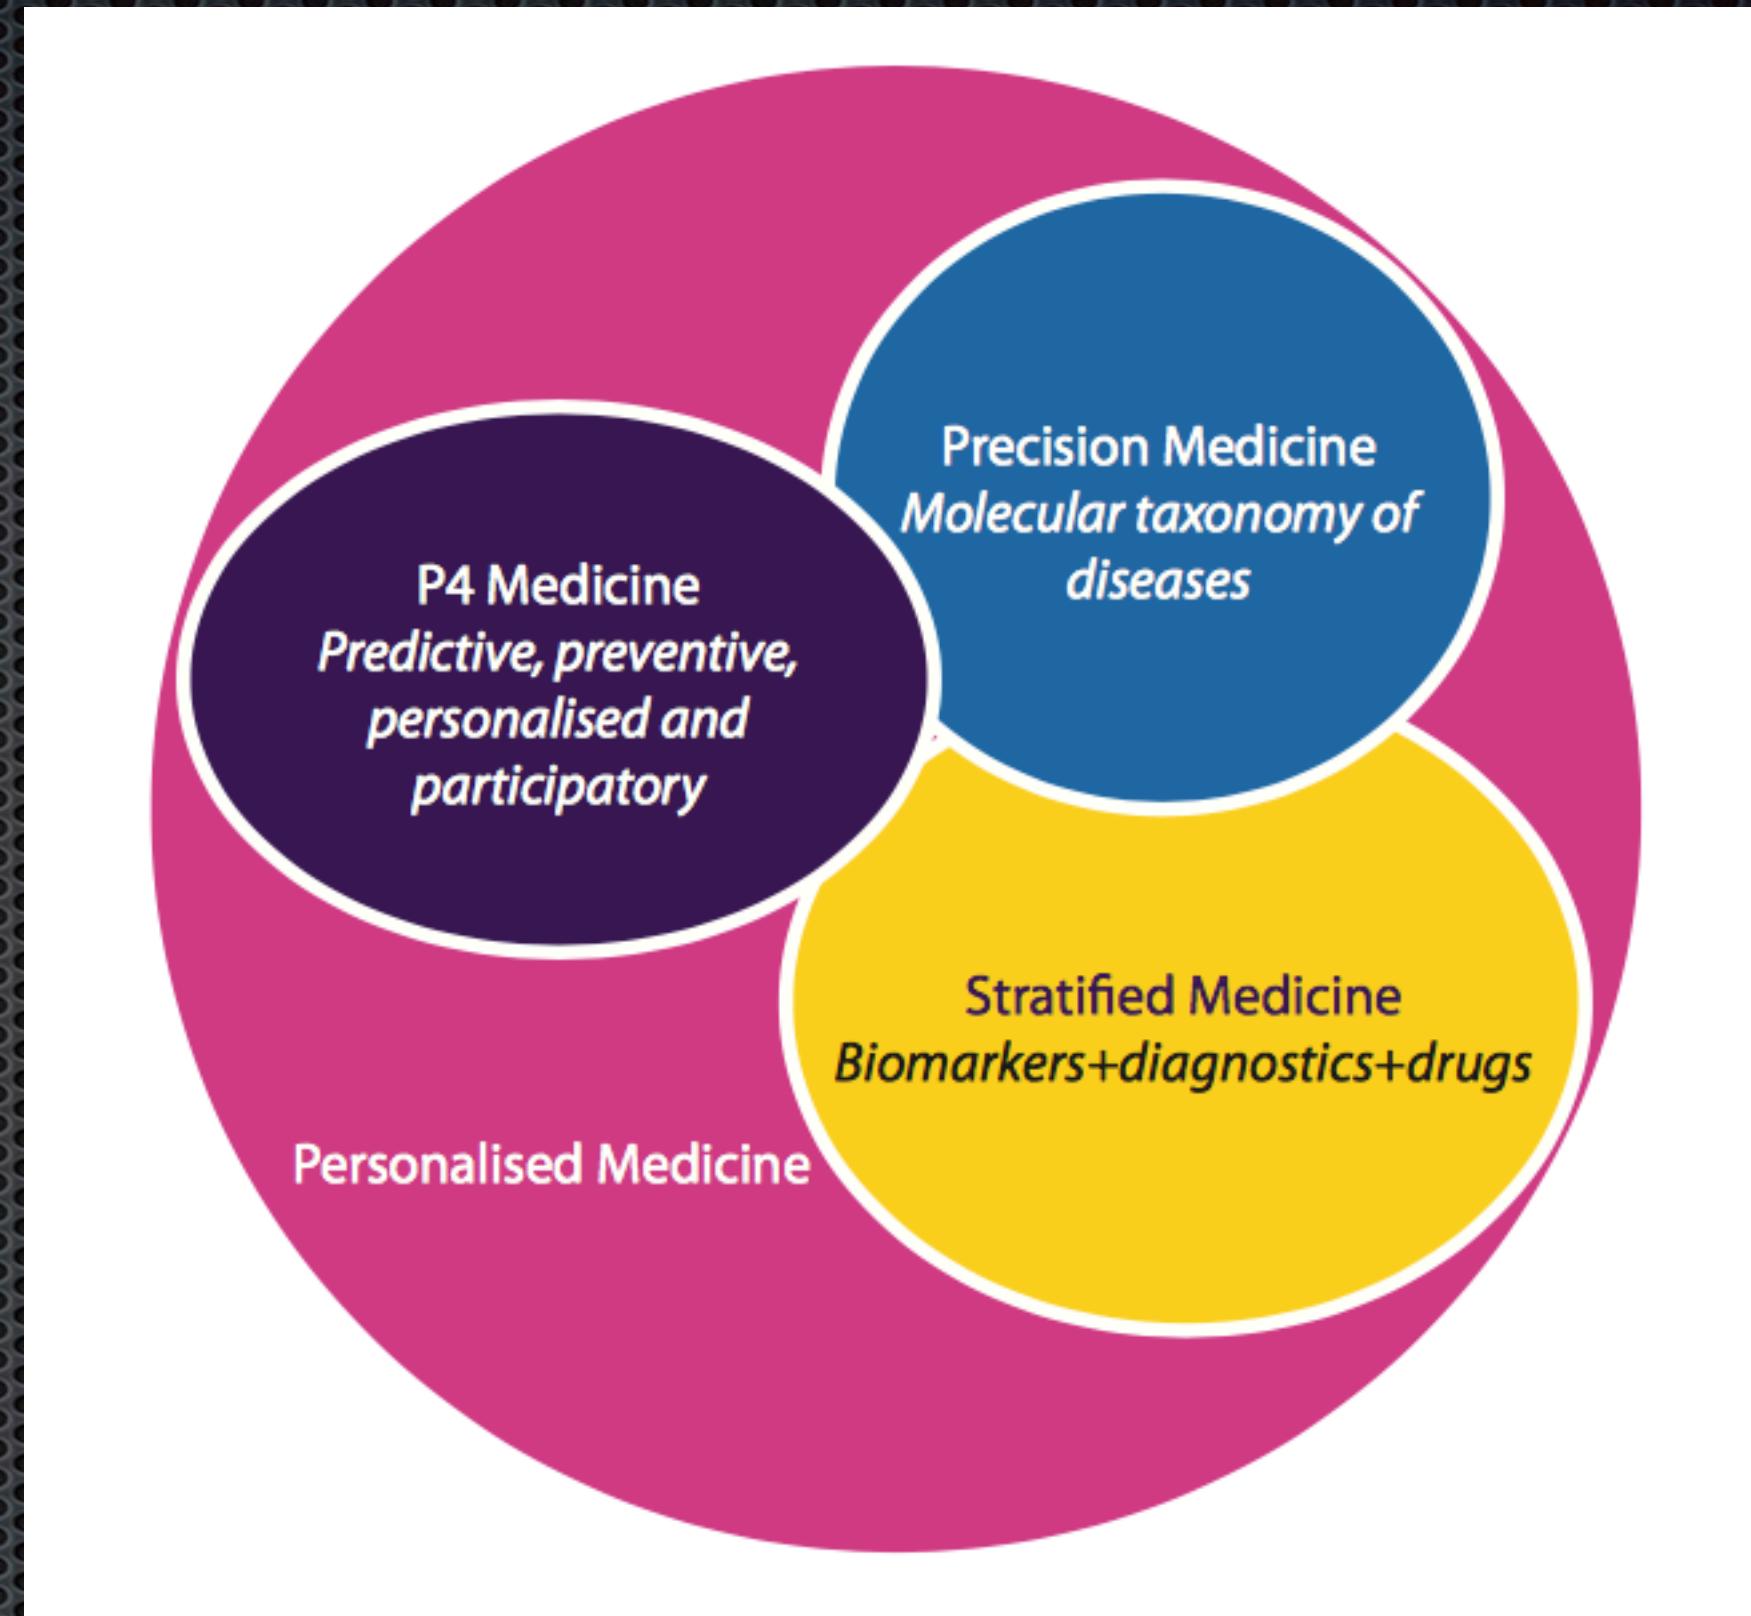

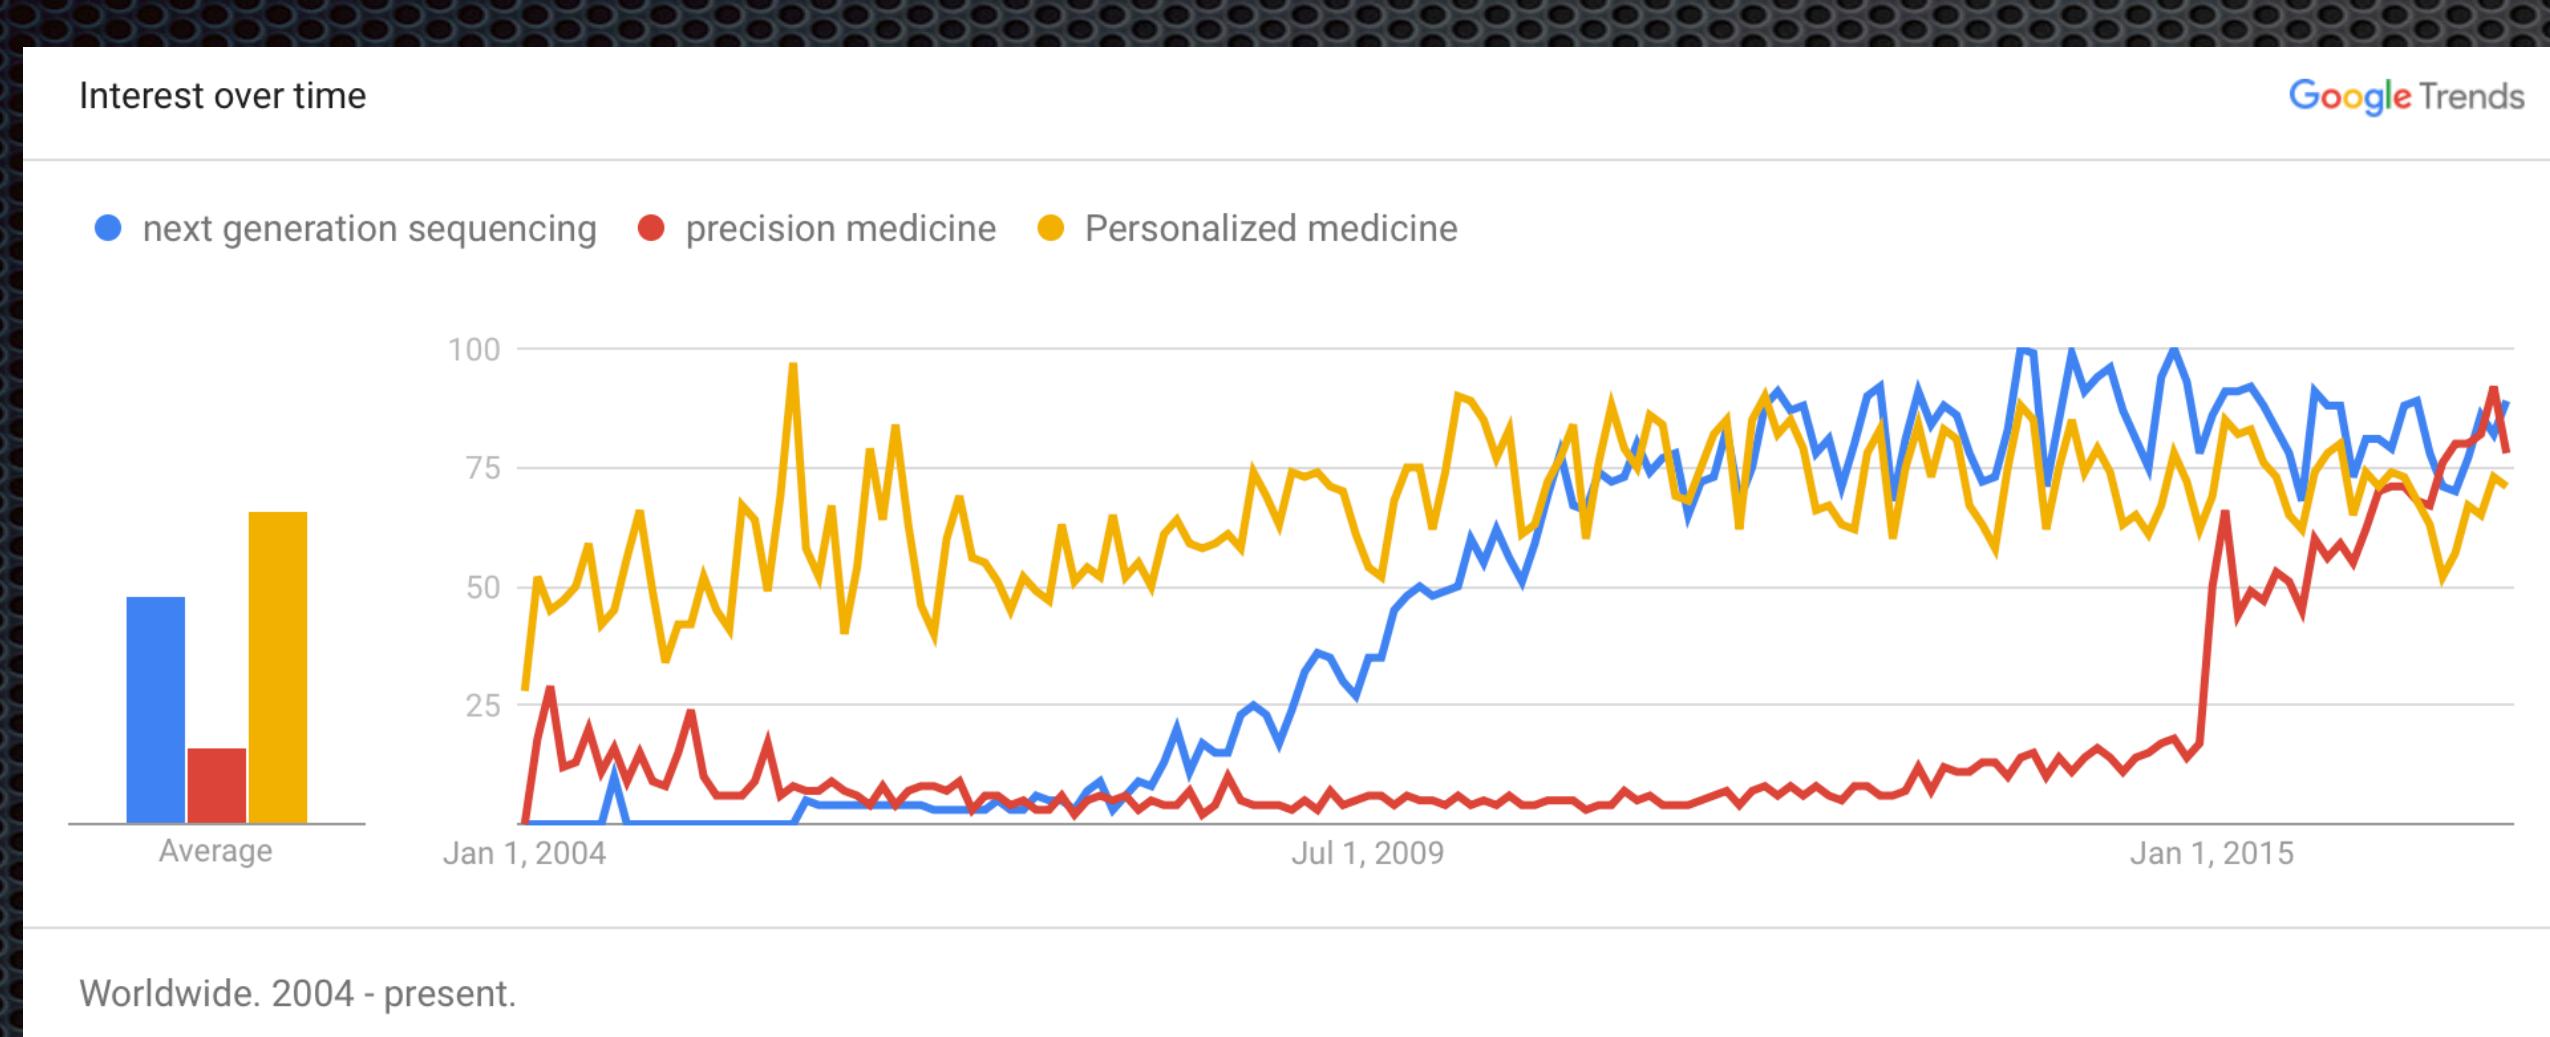

BIO392: Course Schedule

	Tue Sep 15	Wed Sep 16	Thu Sep 17	Fri Sep 18	Tue Sep 22	Wed Sep 23	Thu Sep 24	Fri Sep 25	Tue Sep 29	Wed Sep 30	Thu Oct 1	Fri Oct 2	Tue Oct 6	Wed Oct 7
09:00 - 10:00		Michael: short introductory lecture about genome variation	Izaskun: Terminal / Unix / Files	Michael: genomic file formats		Izaskun: File typers / manipulations	Bo: Introduction to UCSC genome browser	Genome versions & liftover (continued)		Intro online platform Rahel?	Intro to R ...	Genome variants & populations		Exam
10:00 - 11:00		Github exercise: create user specific directories & upload/edit test files using Markdown	Izaskun: Terminal / Unix / Files	ToDo: File formats, calculations		Izaskun: File typers / manipulations	Bo: Introduction to UCSC genome browser	A taste of BLAST and scripting		GATK online course	DNAcopy ... exercise	plink		Exam
11:00 - 12:00			Izaskun: SIB online introduction to Unix			Izaskun: File typers / manipulations	Bo: Introduction to UCSC genome browser	A taste of BLAST and scripting		GATK online course	DNAcopy ... exercise			Exam
13:00 - 14:00	* Room information * Administrative - discuss times/days - exam	Literature (genome variant review papers ...)	Izaskun: SIB online introduction to Unix	ToDo: File formats, calculations	Recap W1; Q&A	Izaskun: file typers/manipulations reading/literature	genome browser related exercises	Python, R ...	Michael: genomic variants w/ respect to schedule etc.	GATK online course	Progenetix as tool for CNV frequencies etc.		Recap; Q&A; genomic privacy (?)	
14:00 - 15:00	Tina Siegenthaler: technical introduction (room,					Literature (genome analysis techniques ...)		read up/look up other genome resources, writing about use cases	Q&A, (Exercises???)			CNV literature etc.	Populations / Ethnicities /	
15:00 - 16:30	* explore course site * create Github accounts and forward to bio392@compbiozurich.org	Exercise: Q&A using Github				Genome technologies - brief notes about usage scenarios, pro & con								

Many names for one concept or many concepts in one name?

Stratified, personalised, precision, individualised, P4 medicine or personalised healthcare – all are terms in use to describe notions often referred to as the future of medicine and healthcare. But what exactly is it all about, and are we all talking about the same thing?

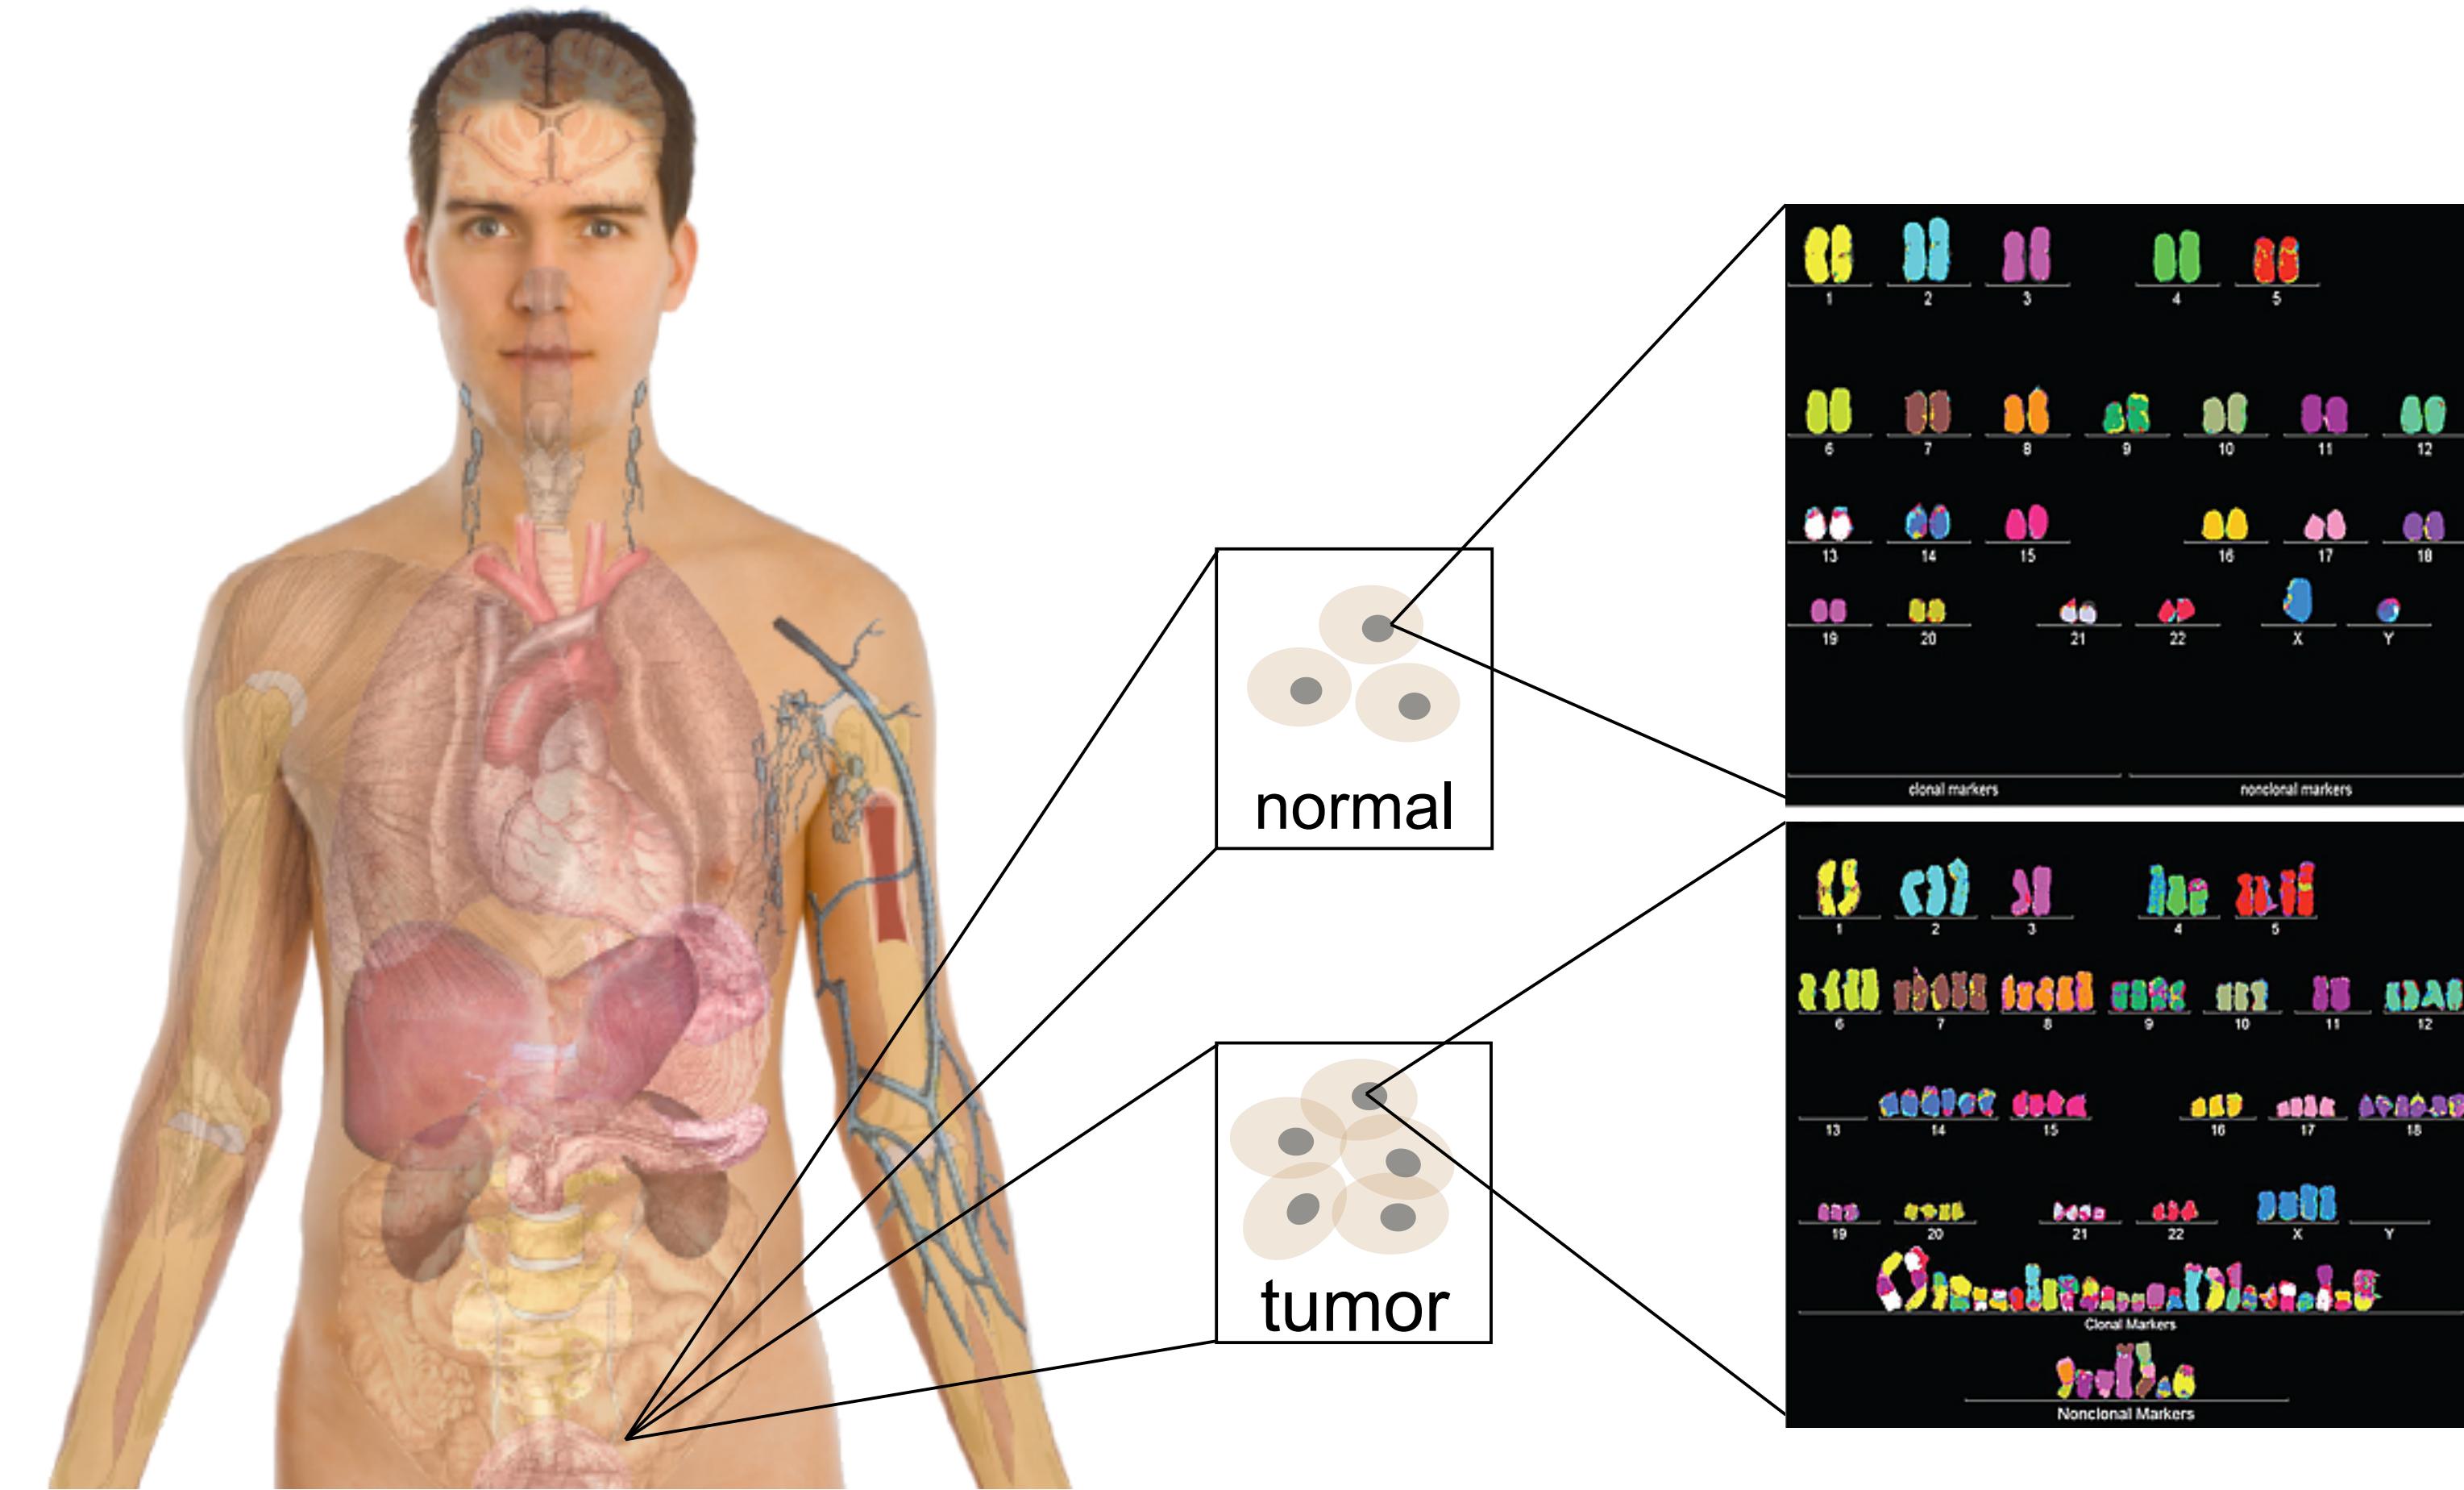

Source: PHG Foundation

While medicine has always been "personal" and "precise" in the given context of available knowledge and technologies, the concept of "**Personalised Medicine**" describes the use of individual genome information, concept based metadata and individually targeted therapies.

Personal Genomics as a Gateway into Biology

Personal genomes soon will become a commonplace part of medical research & eventually treatment (esp. for cancer). They will provide a primary connection for biological science to the general public.

Genome analyses at the core of Personalized Health™

- Genome analyses (including transcriptome, metagenomics) are the **core technologies** for Personalized Health™ applications
- In the context of **academic medicine**, this requires
 - standard sample acquisition procedures & central **biobanking**
 - **core sequencing facility** (large throughput, cost efficiency, uniform sample and data handling procedures)
- secure **computing/analysis** platform
- Standardized **data formats** and **sample identification** procedures
- Metadata rich, reference **variant resource(s)** & expertise
- participation in reciprocal, international **data sharing** and **biocuration** efforts

Genome analyses at the core of Personalized Health™

Susceptibility, Pharmacogenomics, Classification, Infectious Diseases, Outcome Prediction, Lifestyle ...

The trouble with human genome variation

Finding Somatic Mutations In Cancer: Many Needles in a Large Haystack

- a typical human genome (~3 billion base pairs) has ~5 million variants
- most of them are "**rare**"; i.e. can only be identified as recurring when sequencing thousands of people
- cancer cells accumulate additional variants, only **few** of which ("**drivers**") are relevant for the disease

The 1000 Genomes Project Consortium, Nature. 2015. 526:68-74
Khurana E. et al. Nat. Rev. Genet. 2016. 17:93-108

Graphic adapted from Mark Gerstein (GersteinLab.org; @markgerstein)

Mutations & genomic rearrangements in cancer

Lengauer et al. Genetic instabilities in human cancers. Nature (1998) vol. 396 (6712) pp. 643-9

- a. small mutation (di-pyrimidine exchange at p53 in Xeroderma pigmentosum patient)
- b. two-base deletion in *TGFB* in a colorectal cancer patient with mismatch repair deficiency
- c. chromosomal losses (FISH; red=3, yellow=12) in CRC
- d. t(1;17) in neuroblastoma, whole-chromosomal painting
- e. *MYCN* gene amplification (multiple copies inserted into chromosome 1 derived marker)

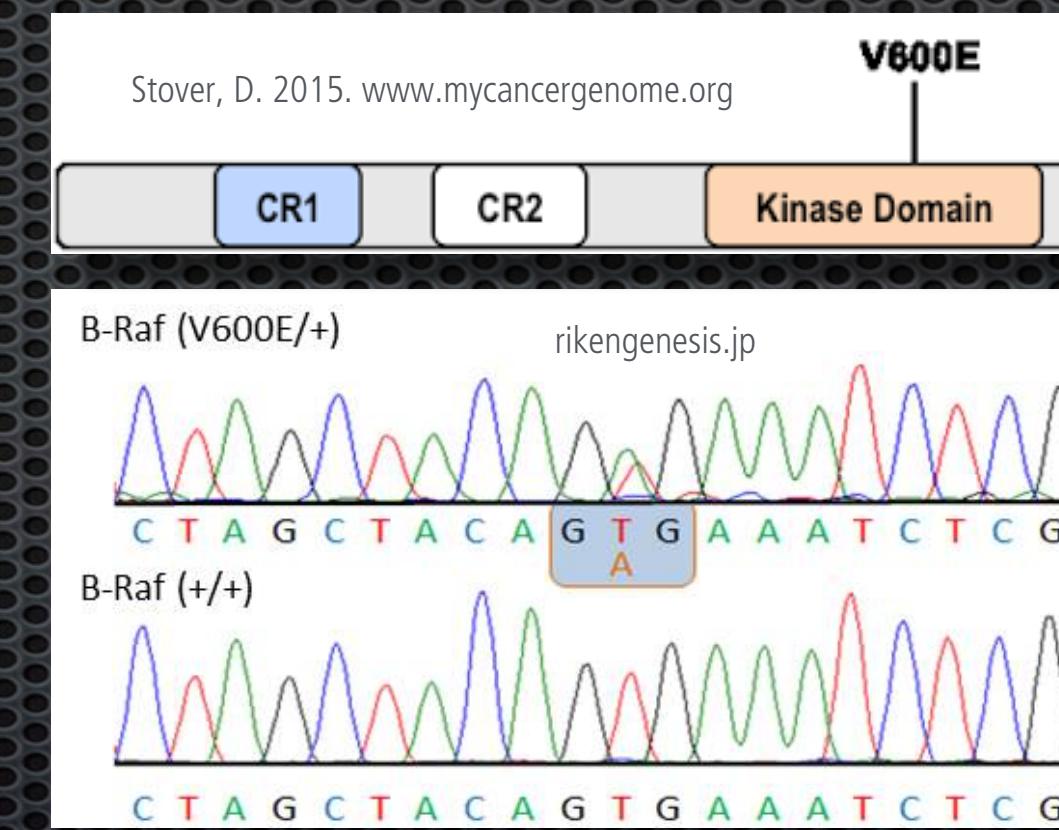

Generation of copy number imbalances in cancer through imbalanced cytogenetic rearrangements - partial deletion of 11q, gain of 11pterq21 and 2 addl. copies of 17q

RL Stallings: Are chromosomal imbalances important in cancer? Volume 23, Issue 6, p278–283, 2007

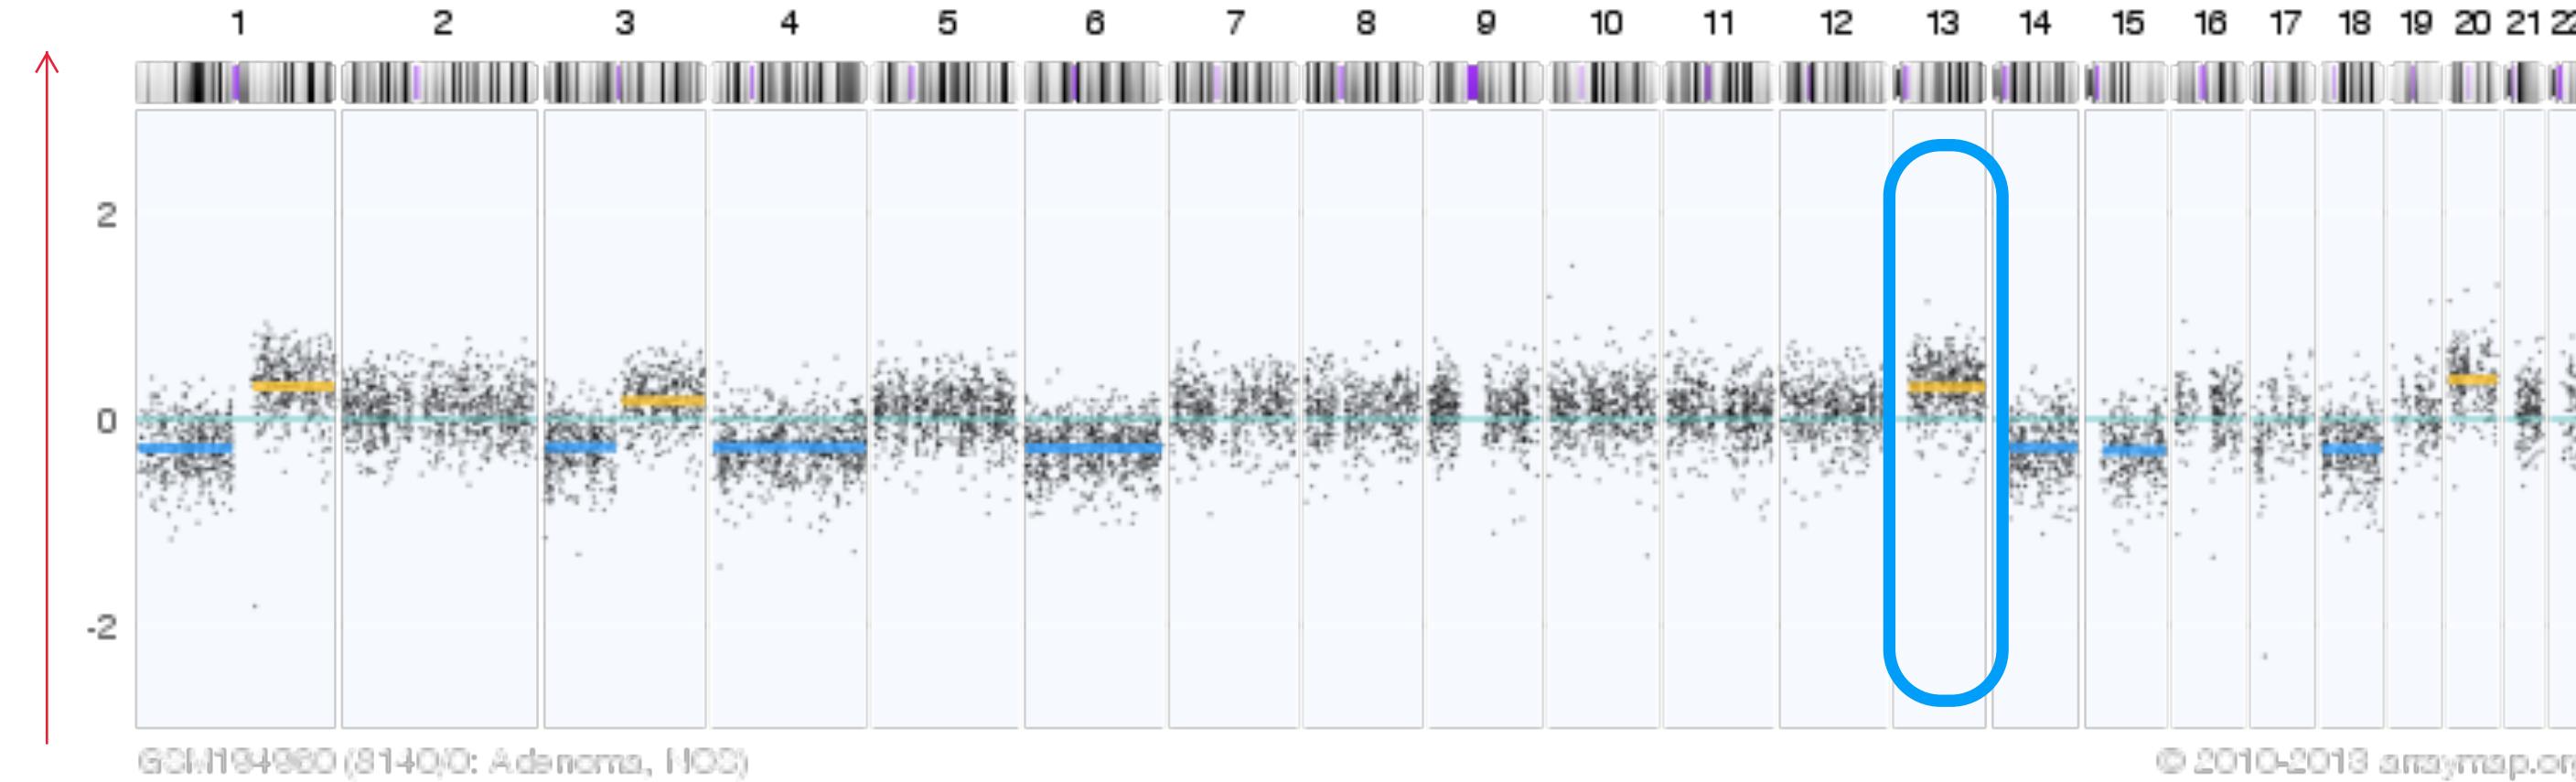

BRAF V600E (c.1799T>A) Mutation Oncogene Activation by Single Nucleotide Alteration

- a single nucleotide exchange Thymidine > Adenine leads to continuous RAF based activation of the MEK-ERK pathway
- BRAF V600E is a frequent mutation in >50% of malignant melanomas, but also CRC, lung ADC ...
- pharmacologic block of B-Raf (e.g. through **Vemurafenib**)

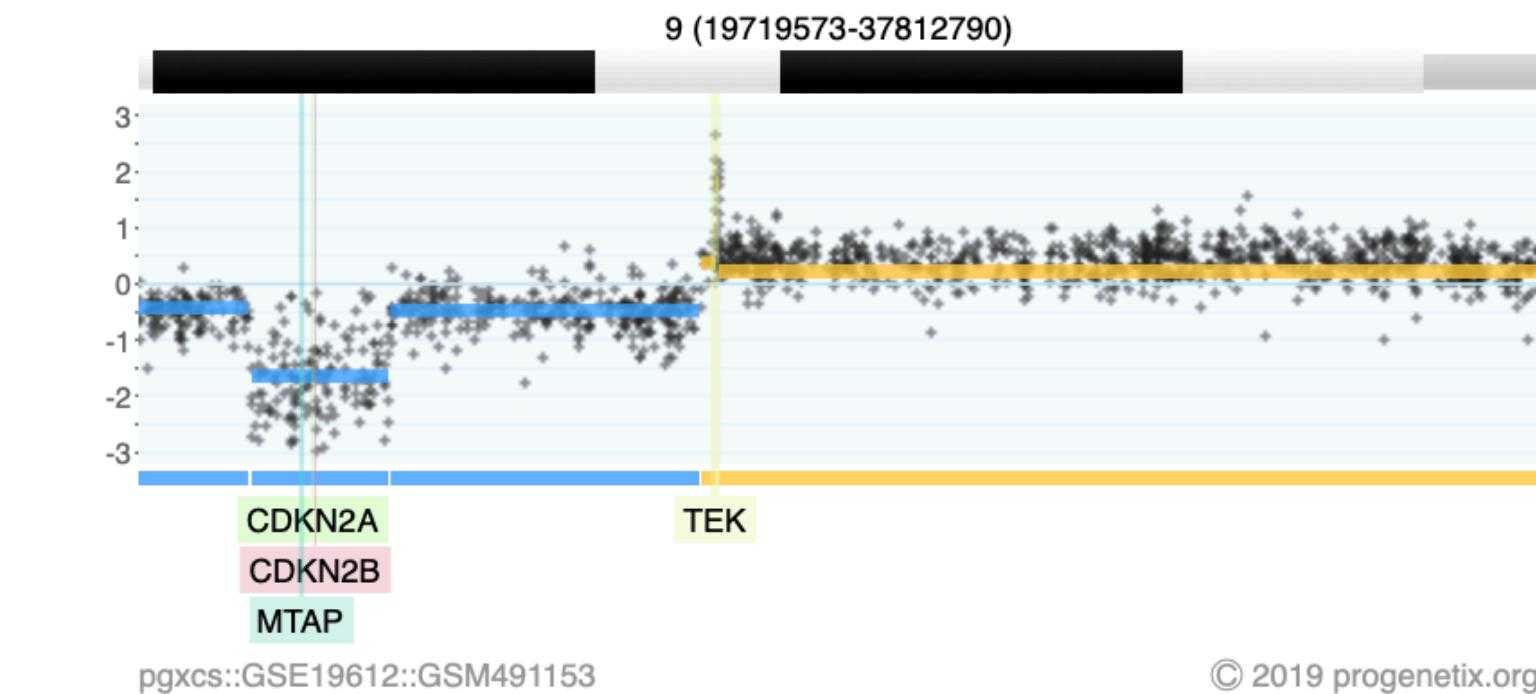

The BRAF V600E mutation leads to continuous phosphorylation of MEK, without the need for receptor based activation of the upstream pathway and loss of inhibitory feedback control.

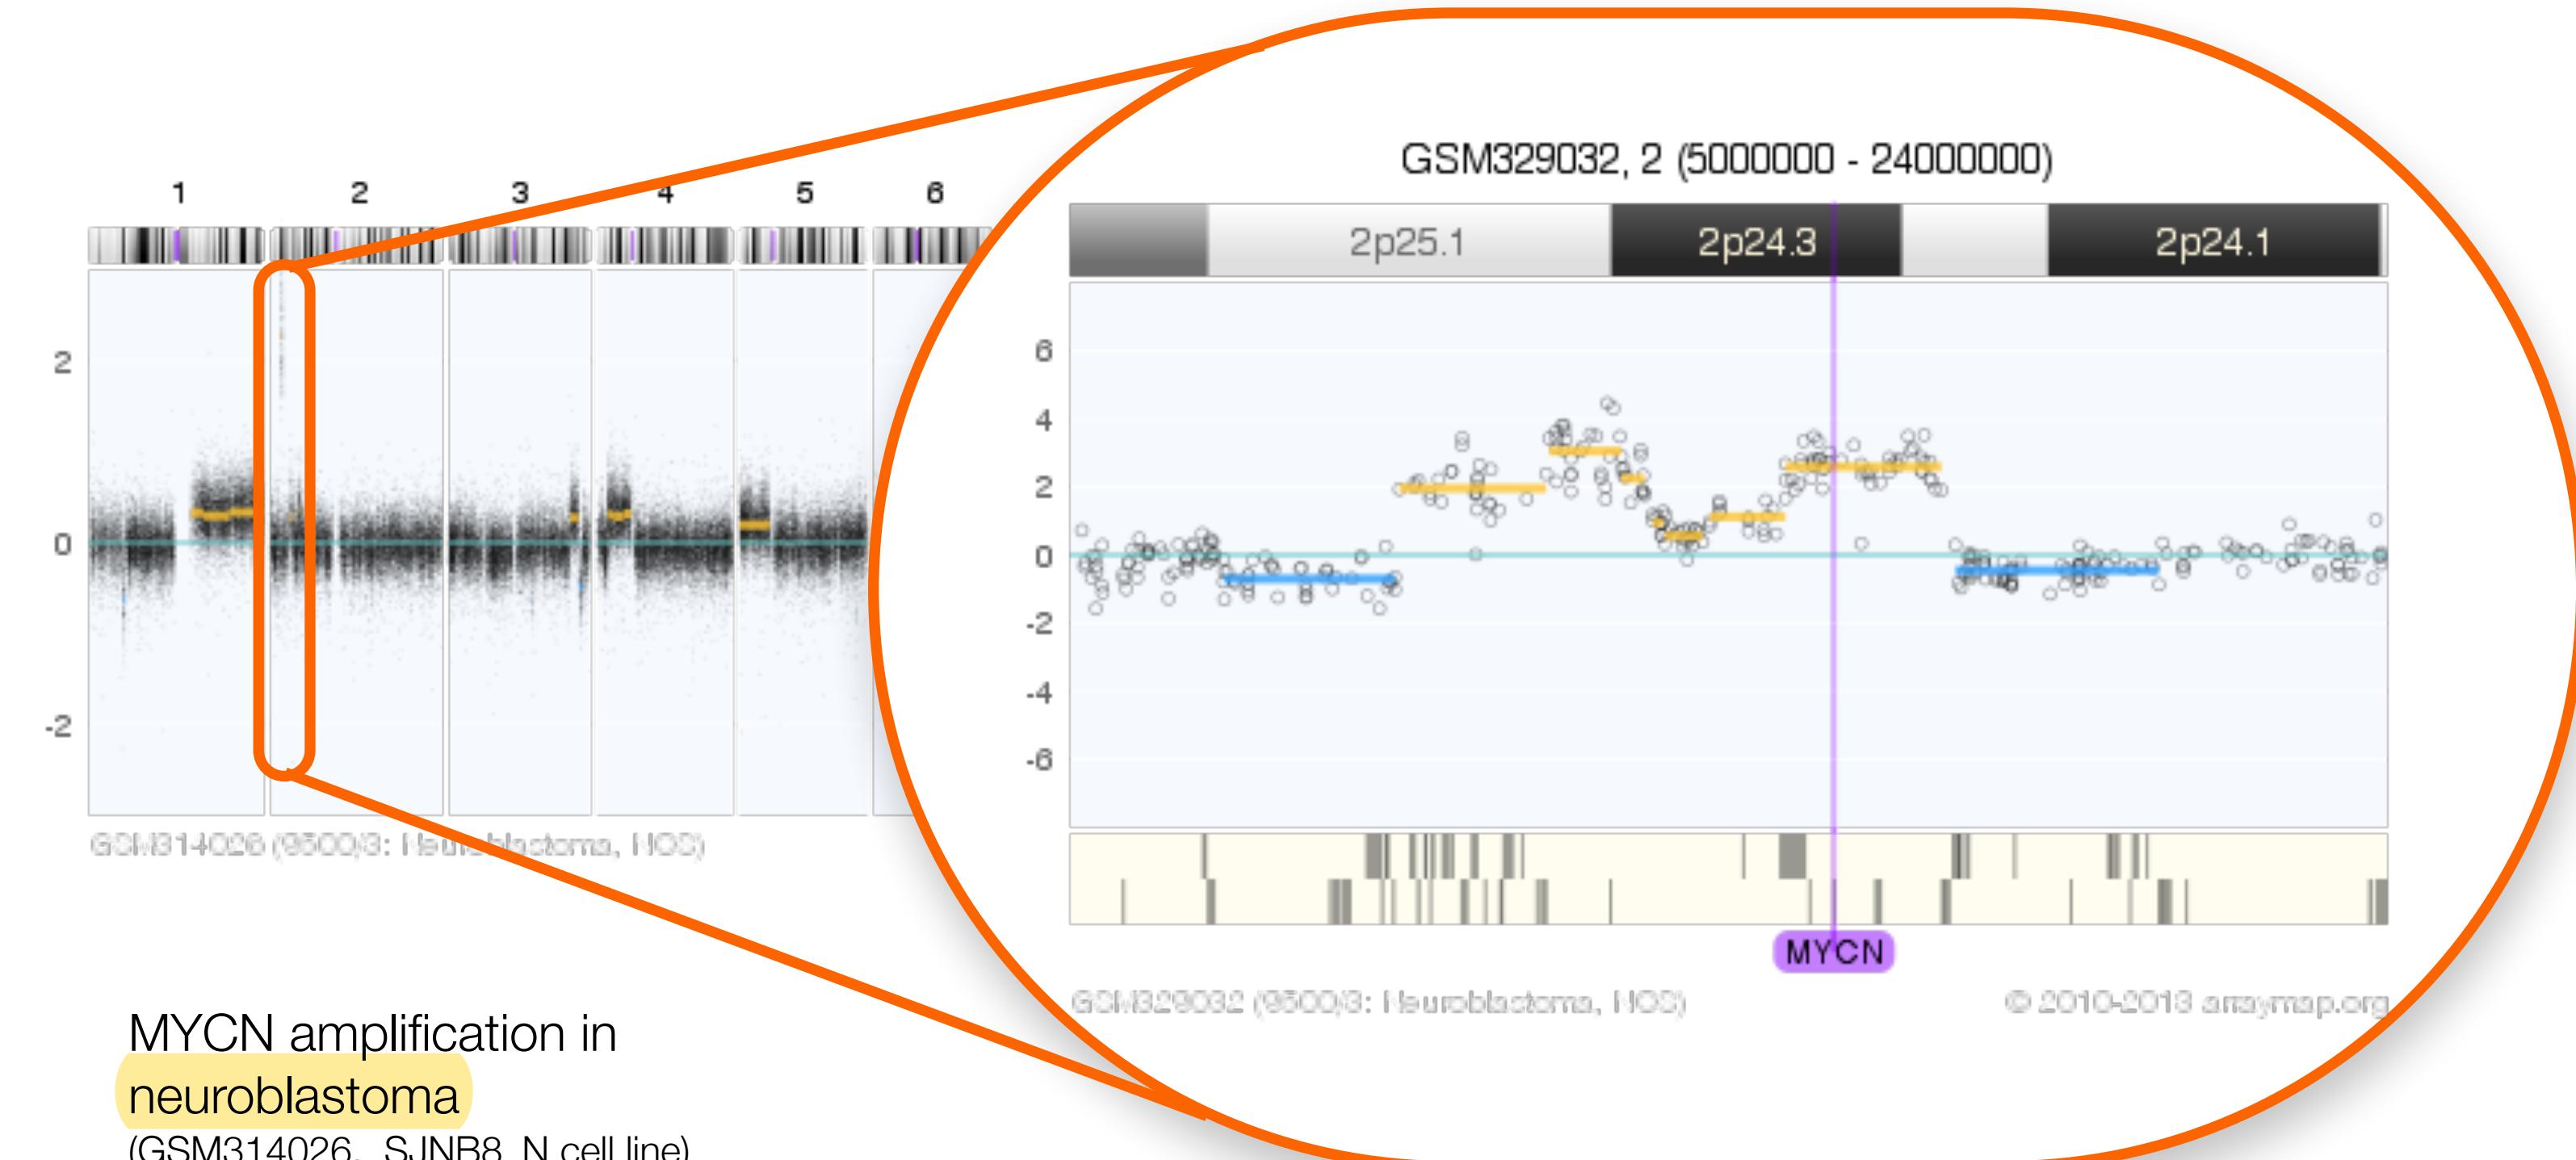

Somatic Copy Number Variations

Gain of chromosome arm 13q in colorectal carcinoma

2-event, homozygous deletion in a Glioblastoma

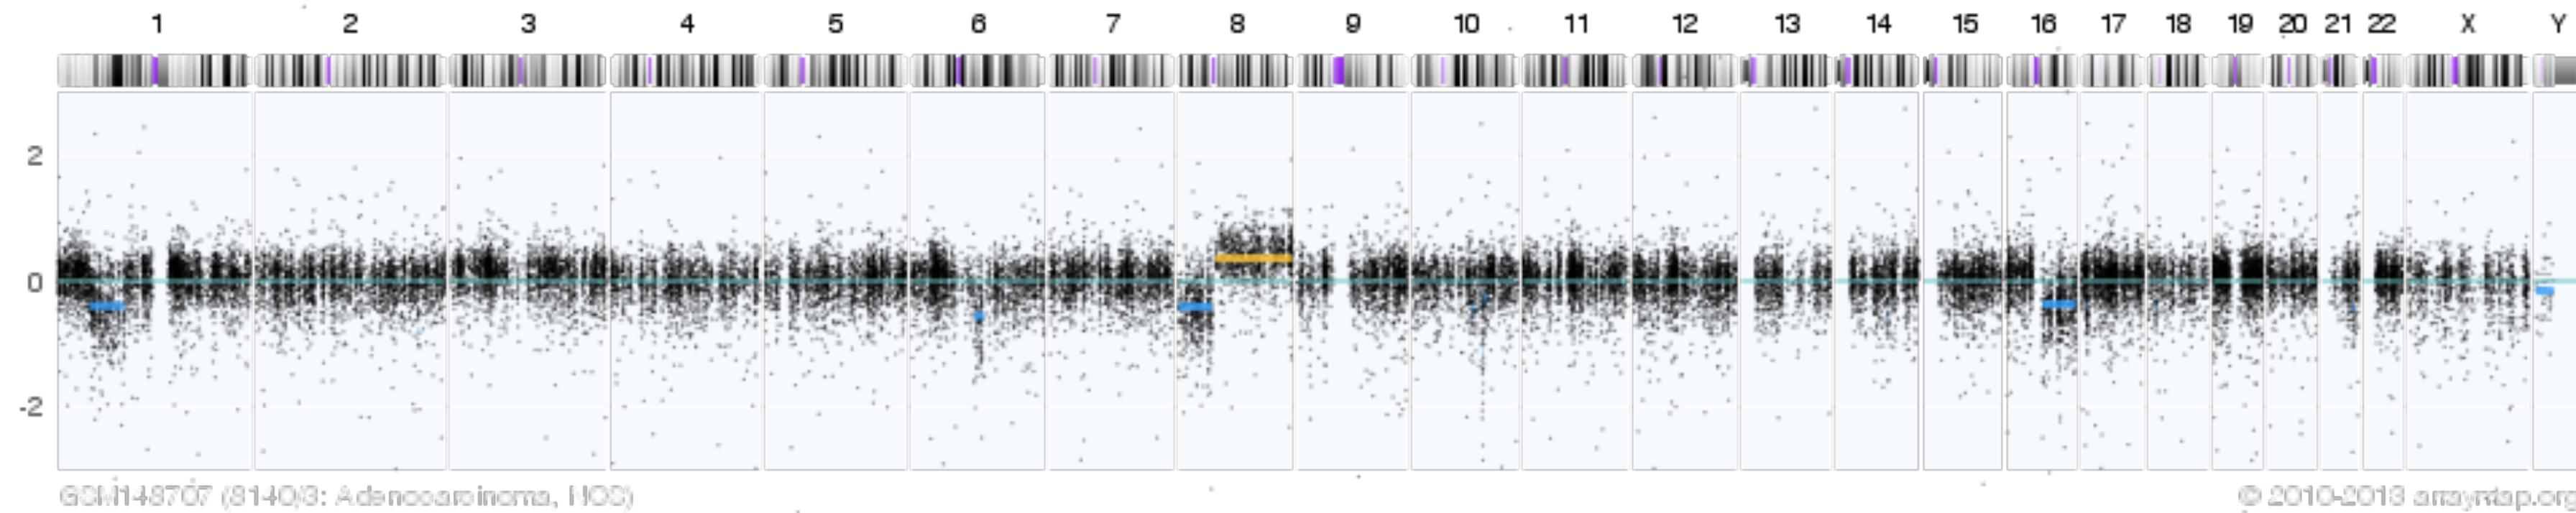

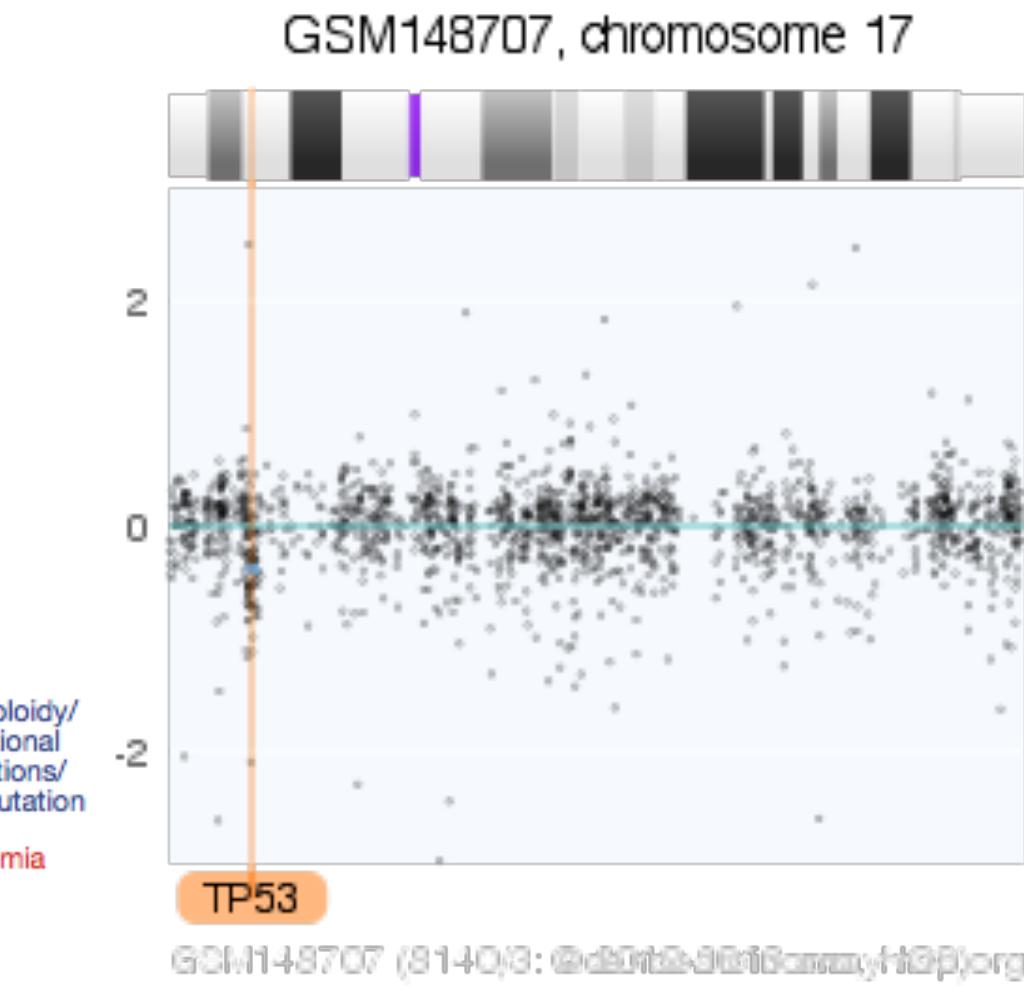

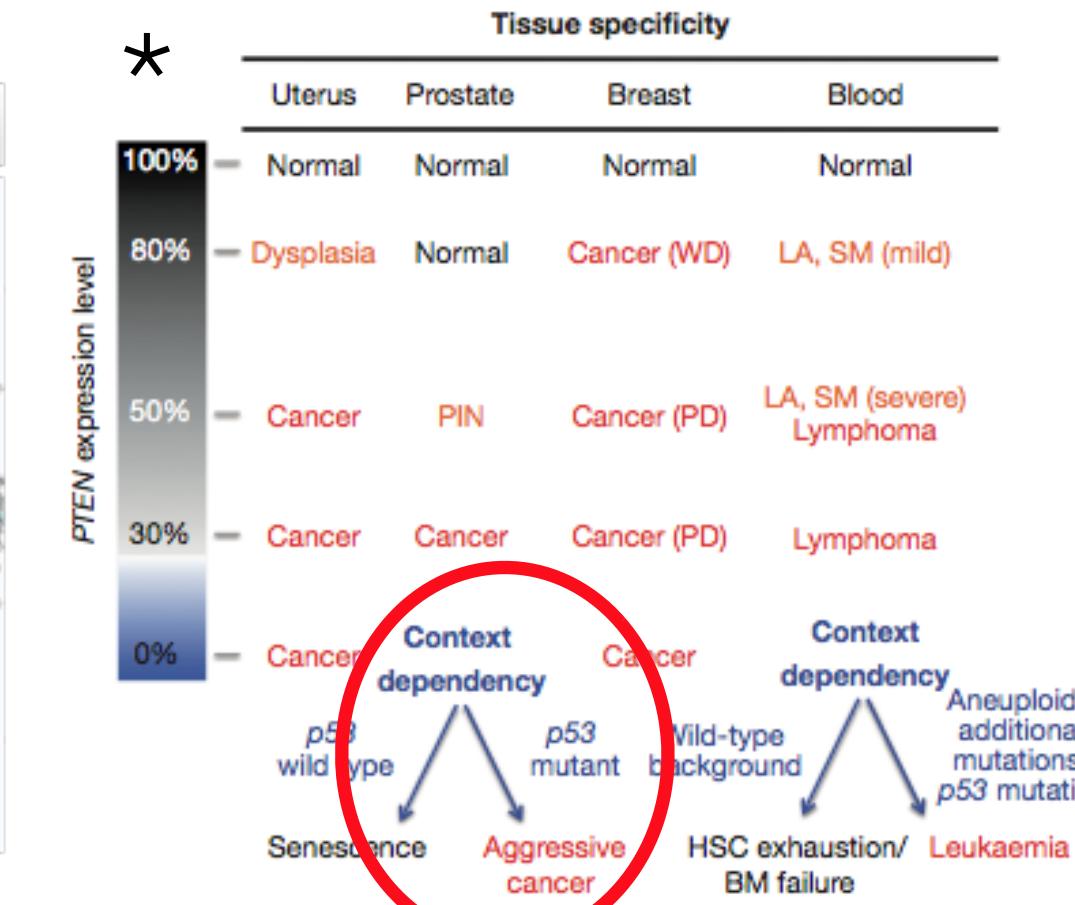

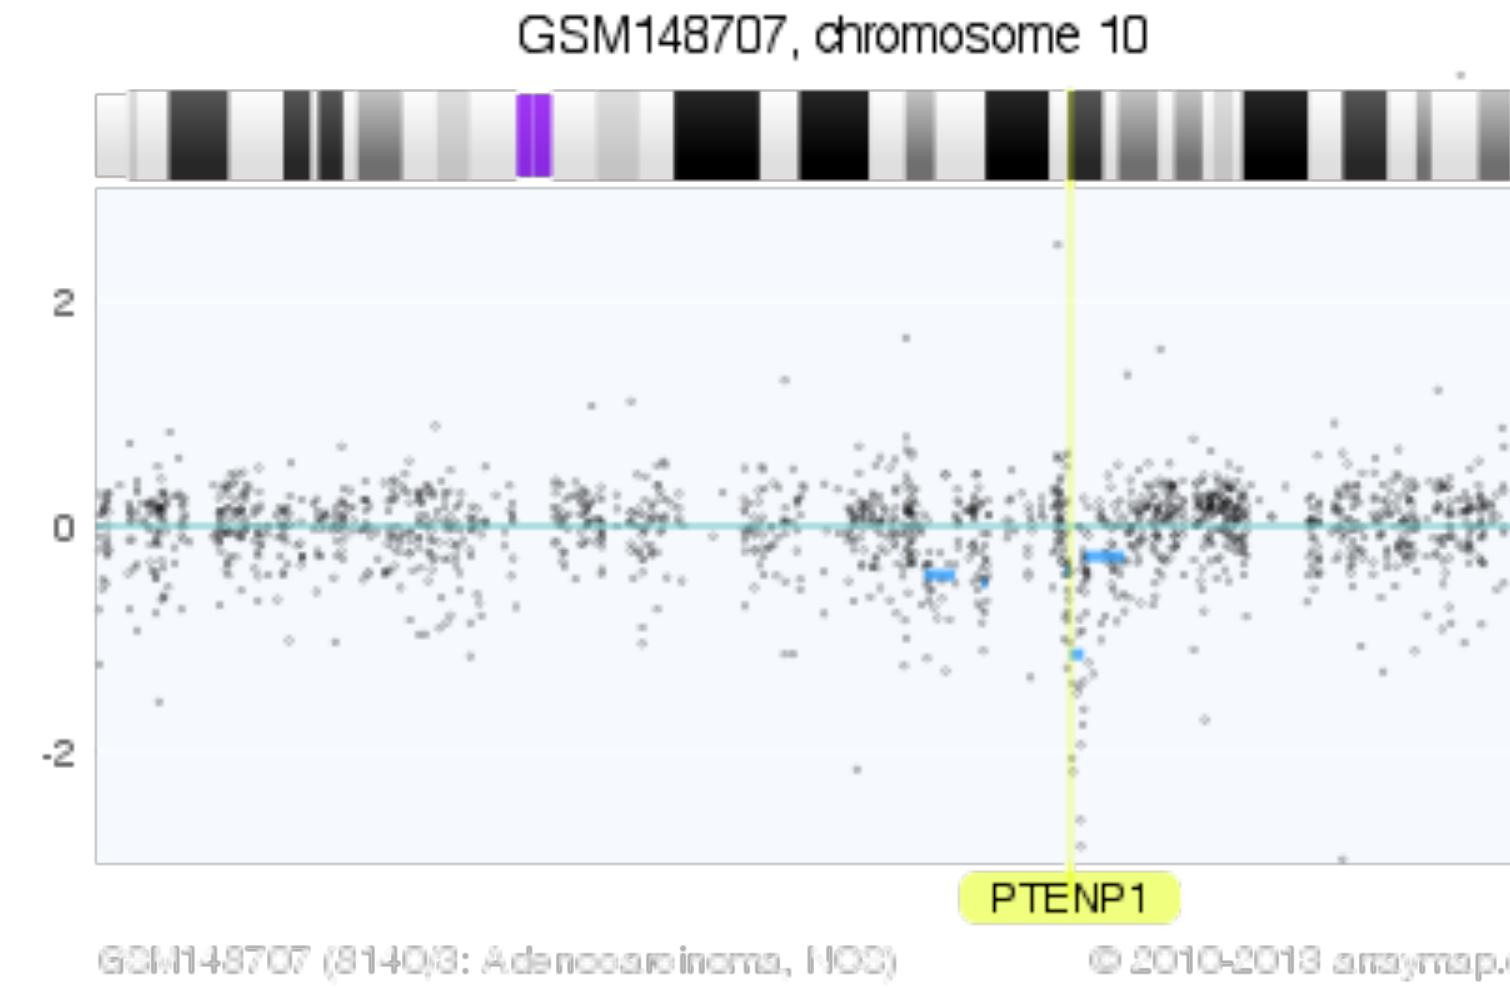

MYCN amplification in neuroblastoma

Genomes Everywhere

Organization / Initiative: Name	Organization / Initiative: Category	Cohort
100K Wellness Project	Research Project	107 unaffected individuals (scaling up to 100,000)
23andMe	Organization	>1 million customers (>80% consented to research)
Actionable Cancer Genome Initiative (ACGI)	Data-Sharing Project	Goal: 100,000 individuals
Ancestry.com	Organization	1.4 million customer DNA samples (what % consented to research?)
BioBank Japan	Repository	Specimens from >200,000 patients and unaffected controls
Cancer Moonshot2020	Consortium	Phase 1: 20,000 cancer patients
Children's Hospital of Philadelphia Biorepository	Repository	Capacity for 8.6 million samples
China Kadoorie Biobank	Repository	>512,000 participants (general population, China). Genotyping data available for ~100,000.
CIMBA	Consortium	>15,000 BRCA1 carriers, >8,000 BRCA2 carriers
Clinical Sequencing Exploratory Research (CSER)	Consortium	~4,000 patients and healthy controls
DECIPHER	Repository	19,014 patients (international)
deCode Genetics	Organization	500,000 participants (international)
East London Genes & Health	Research Project	100,000 unaffected individuals (East London, Pakistani or Bangladeshi heritage)
Electronic Medical Records and Genomics (eMERGE) Network	Repository, Consortium, Research Project	55,028 patients
European Network for Genetic and Genomic Epidemiology (ENGAGE)	Research Project	80,000 GWAS scans, and DNA and serum/plasma from >600,000 individuals
Exome Aggregation Consortium (ExAC)	Consortium	60,706 individuals
GENIE/AACR	Data-Sharing Project	>17,000 cancer patients (international)
Genome Asia 100K	Consortium	Goal: 100,000 individuals (Asia)
Genomics England	Organization	Goal: 100,000 genomes from 70,000 individuals (rare disease & cancer patients, and their relatives)
GoT2D	Consortium, Data-Sharing Project	Multiple case-control cohorts
International Cancer Genome Consortium (ICGC)	Consortium	currently data from >16'000 samples
International Genomics of Alzheimer's Project (IGAP)	Consortium	40,000 patients with Alzheimer's disease
International Multiple Sclerosis Genetics (IMSG) Consortium	Consortium	Goal: >50,000 patients with MS
Kaiser Permanente: Genes, Environment, and Health (RPGEH)	Repository, Research Project	200,000 DNA samples (scaling up to 500,000)
Leiden Open Variation Database (LOVD)	Repository	>170,000 individuals
Million Veteran Program	Research Project	Goal: 1 million individuals; first 200,000 is complete.
MyCode® Community Health Initiative	Repository, Research Project	Goal: >250,000 patients
Precision Medicine Initiative	Research Project	Goal: >1 million participants, starting in 2016 (US)
Psychiatric Genomics Consortium (PGC)	Consortium	>170,000 subjects
Resilience Project	Research Project	589,306 individuals
Saudi Human Genome Program	Research Project	Goal: ~100,000 patients and controls (Saudi Arabia)
Scottish Genomes Partnership (SGP)	Research Project	>3,000 individuals (Scotland)
T2D-GENES	Consortium, Data-Sharing Project	10,000 patients and controls (five ethnicities); 600 individuals (Mexican American)
TBResist	Consortium	>2,600 samples
UK Biobank	Repository, Consortium, Research Project	500,000 individuals (age 40-69 years; UK)
UK10K	Research Project	10,000 participants (6,000 patients and 4,000 controls)
Vanderbilt's BioVU	Repository	>215,000 samples

Cancer Gene Census Update

7 genes have been added to the [Cancer Gene Census](#) -

- EPAS1 - Endothelial PAS domain protein 1.
- PTPRT - Protein tyrosine phosphatase, receptor type T.
- PPM1D - Protein phosphatase, Mg²⁺/Mn²⁺ dependent 1D.
- BTK - Bruton tyrosine kinase.
- PREX2 - Phosphatidylinositol-3,4,5-trisphosphate dependent Rac exchange factor 2.
- TP63 - Tumour protein p63.
- QKI - QKI, KH domain containing RNA binding.

For full details, see the [Datasheet](#).

RESOURCES FOR GENOMICS: CLINGEN

- ▶ "The Genomic Variant WG brings together representatives from the Sequence and Structural Variant communities for focused discussions on resolving discrepancies in variant interpretation and creating consistent curation guidelines."
- ▶ Interpreted genome variants with disease association

The screenshot shows the ClinGen Clinical Genome Resource website. At the top right is a search bar with the placeholder "Search our Knowledge Base for genes and diseases..." and a magnifying glass icon. Below the search bar are navigation links: About ClinGen, Working Groups, Resources, GenomeConnect, Share Your Data (highlighted in blue), and Curation Activities. The main banner features a blue background with a blurred image of laboratory glassware and a computer screen displaying genetic data. The text "Defining the clinical relevance of genes & variants for precision medicine and research..." is centered above three large numbers: 1496 (ClinGen Curated Genes), 31 (Expert Groups), and 10446 (Expert Reviewed Variants in ClinVar). To the right of these numbers is a magnifying glass icon labeled "Knowledge Base Search". Below the banner, the tagline "Sharing Data. Building Knowledge. Improving Care." is displayed, followed by a description of ClinGen's mission. Six call-to-action boxes are arranged in a grid at the bottom:

- ClinGen-ClinVar Partnership (Icon: DNA helix inside a circle)
- How to share genomic & health data (Icon: DNA helix inside a circular arrow)
- Learn about ClinGen curation activities (Icon: Computer monitor with DNA helix)
- GenomeConnect Patient Registry (Icon: Three DNA helices)
- View ClinGen's Resources & Tools (Icon: Computer monitor with multiple windows)
- Get Involved (Icon: Computer keyboard, mouse, and notepad)

clinicalgenome.org

The ClinGen and ClinVar Partnership

Both provide resources to support genomic interpretation

- ▶ ClinVar (an NCBI database/resource) is used as basis for curated variant <-> disease associations in ClinGen
- ▶ ClinGen - a funded project (application/funding limited)
- ▶ ClinVar - an internal NIH resource (dependent on political "goodwill")

ClinGen - A Program

An NIH funded project

Building a central resource that defines the clinical relevance of genes and variants

ClinGen is addressing the following critical questions:

- Is the gene associated with disease?
- Is the variant pathogenic?
- Is the variant/gene information actionable?

Encouraging data sharing

- Promote lab submissions to ClinVar
- Facilitate patient data sharing through GenomeConnect

Assessing the clinical **validity** and **actionability** of genes and their relationship to diseases

ClinVar- A Database

Funded by intramural NIH funding

Freely accessible and downloadable public archive of reports of the relationship between variants and conditions

Maintained by the National Center for Biotechnology Information (NCBI)

Maintaining a publicly available **database** of:

- Interpretations of the clinical significance of variants
- Submitter information
- Supporting evidence and individual level data, when available

Cancer Genome Anatomy Project (CGAP)

The NCI's Cancer Genome Anatomy Project sought to determine the gene expression profiles of normal, precancer, and cancer cells, leading eventually to improved detection, diagnosis, and treatment for the patient. Resources generated by the CGAP initiative are available to the broad cancer community. Interconnected modules provide access to all CGAP data, bioinformatic analysis tools, and biological resources allowing the user to find "in silico" answers to biological questions in a fraction of the time it once took in the laboratory.

The CGAP Website

Interconnected modules provide access to all CGAP data, bioinformatic analysis tools, and biological resources allowing the user to find "in silico" answers to biological questions in a fraction of the time it once took in the laboratory.

Genes Gene information, clone resources, SNP500Cancer, GAI, and transcriptome analysis.

Chromosomes FISH-mapped BAC clones, SNP500Cancer, and the Mitelman database of chromosome aberrations.

Tissues cDNA library information, methods, and EST-based gene expression analysis.

Pathways Diagrams of biological pathways and protein complexes, with links to genetic resources for each known protein.

RNAi RNA-interference constructs, targeted specifically against cancer relevant genes. New addition: Validated set of shRNAs.

Announcements

23/August/2016 - The ICGC Data Coordination Center (DCC) is pleased to announce ICGC data portal data release 22 (<http://dcc.icgc.org>).

ICGC data release 22 in total comprises data from more than 16,000 cancer donors spanning 70 projects and 21 tumour sites.

17/April/2016 - ICGCmed is pleased to announce the release of its white paper (<http://icgcmed.org>).

The International Cancer Genome Consortium for Medicine (ICGCmed) will link genomics data to clinical information, health and responses to therapies.

18/November/2015 - The International Cancer Genome Consortium (ICGC) PanCancer dataset generated by the PanCancer Analysis of Whole Genomes (PCAWG) study is now available on Amazon Web Services (AWS), giving cancer researchers access to over 2,400 consistently analyzed genomes corresponding to over 1,100 unique ICGC donors (<https://icgc.org/icgc-in-the-cloud>).

About

The Precision Medicine Knowledgebase (PMKB) is a project of the Englander Institute for Precision Medicine (EIPM) at Weill Cornell Medicine.

PMKB provides information about clinical interpretations of cancer variants in a structured way. It allows users to browse, submit and edit existing entries for continued growth of the knowledgebase. All changes are reviewed by molecular pathologists and oncologists.

Part of the [Variant Interpretation for Cancer Consortium \(VICC\)](#), a Driver Project of the [Global Alliance for Genomic Health \(GA4GH\)](#)

Cancer Genome Anatomy Project (CGAP)

The NCI's [Cancer Genome Anatomy Project](#) sought to determine the gene expression profiles of normal, precancer, and cancer cells for diagnosis, and treatment for the patient. Resources generated by the CGAP initiative are available to the broad cancer community. Data, bioinformatic analysis tools, and biological resources allowing the user to find "in silico" answers to biological questions in a timely manner.

[Read more about CGAP](#) and access the many valuable resources.

Cancer Genome Characterization Initiative (CGCI)

The [Cancer Genome Characterization \(CGC\) Initiative](#): Assessing the use of new genomics technologies to strategically characterize tumors. Groups involved with the CGCI Initiative make all of their data available through a publicly accessible database. Cancer CGCI incorporates genomic characterization methods including exome and transcriptome analysis using second generation sequencing to identify genetic changes leading to cancer.

[Read more about the CGC Initiative](#) and how the project is enabling the next generation of discovery through rapid data release and analysis.

visualizing cancer genome array data @ arraymap.org

arrayMap is a curated reference database and bioinformatics resource targeting copy number profiling data in human cancer. The arrayMap database provides an entry point for meta-analysis and systems level data integration of high-resolution oncogenomic CNA data.

The current data reflects:

72724 genomic array profiles

898 experimental series

257 array platforms

341 ICD-O cancer entities

795 publications (Pubmed entries)

Genomic copy number imbalances on chromosome 9 in a case of Glioblastoma ([GSM491153](#)), indicating, among others, a homozygous deletion involving CDKN2A/B.

For the majority of the samples, probe level visualization as well as customized data representation facilitate gene level and genome wide data review. Results from multi-case selections can be connected to downstream data analysis and visualization tools, as we provide through our Progenetix project.

arrayMap is developed by the group "Theoretical Cytogenetics and Oncogenomics" at the Institute of Molecular Life Sciences of the University of Zurich.

arrayMap

Progenetix - Cancer CNV Information Resource

- launched online in 2001 as *progenetix.net*
- curation** of published CNV profiling data
 - originally cCGH and CNV extraction from Mitelman database
 - + aCGH, WES, WGS; - karyotype data
- increasingly focused on representing the "publication landscape" of cancer genome screening - What? Where?
- Genomes:**
 - 93640 CNV profiles (cCGH, aCGH, WES, WGS) from 469 cancer types (NCIt & ICD-O mapping)
 - 6'817'645 "CNVs" (i.e. called segments)
- Articles:**
 - 3229 registered articles
 - geographic mapping
 - "cancer type" labelling
 - represent 174'530 reported samples
